

ABOUT US

Silexica was founded in 2014 and is the leading provider of software design automation tools. The SLX Tool Suite helps Software Developers and HW/SW System Architects to efficiently design and program multicore and manycore systems.

Silexica is a privately held company with offices in Silicon Valley, Germany, Japan and China. It serves a large array of companies and organizations across multiple markets and geographies.

WHAT WE OFFER

The unique, award winning SLX Tool Suite includes integrated software tools to address complex multicore designs and software problems.

The SLX Mapper – automatically distributes software to multicore and manycore platforms

The SLX Generator – generates parallel C/C++ code to multicore architectures by using unique source-to-source compiler technology

The SLX Parallelizer - automatically identifies parallelism inside legacy C/C++ code

The SLX Explorer – enables hardware design space exploration

Key benefits of the SLX Tool Suite:

- Early Risk Analysis
- Faster time-to-market of new products
- Boost productivity of developers and SW/HW system architects

PRIMARY MARKETS

- Wireless Communication
- Embedded Vision
- Automotive
